#6 REV.A Drill Pressure Filters With Full Reverse Flow

In the below photos are the new pressure filters that can be used on all drills. They filter when pressure is going through them and bypass when oil is returning. All the brackets and hose clamps are in a kit that can be welded on to the skid easily. We have created a hose and fitting kit as well.

The hose bundle connects to the filters, and from the filters to the manifold. There are indicators on top of the filters to show when clogged. Servicing the filters is suggested at 6 months or 1,000 hours, or of course if the indicator signals. The filters are rated to 6500 P.S.I. to meet the different motor ratings. If these kits are needed we will supply the information and drawings or complete product.
